This innovation is brilliant in helping to achieve a comfortable and quiet mouth. Turtle Top™ with Flex™ keeps the mouthpiece centred and arched over the tongue at all times, encouraging relaxation.

This comfortable mouthpiece re-focuses the inattentive mouth back onto the rein aids in order to achieve a soft consistent contact.

By combining this mouthpiece with a D-Ring it enhances directional control making it exceptionally good for tight turns during faster work as the mouthpiece should not slide across the mouth. It's also good for dressage as it gives the rider greater shoulder control on a circle and helps set up the bend when changing the rein or with lateral work.

The stability the D-Ring offers along with the clever design of the mouthpiece is often useful for horses that are overactive in the mouth in a loose ring design.
