The NS Nelson cheeks (full cheeks) reinforce the turning aid, reduce friction and lessen the chance of rubbing. Brilliant where precise steering is required, for instance the directional control needed for jumping 'skinnies' or corners. The two rein options allow the rider to have varying degrees of control being able to differentiate between the snaffle rein and the running cheek rein that provides poll pressure. However, many riders successfully only employ the running cheek rein which maximises on control and lift from the shoulder. Use either in conjunction with our own rolled leather cheeks, aesthetically pleasing and softer in their action, or our rope cheeks that have a faster action.
