The NS Tranz Jumpers' Choice/Ride & Drive offers extra lift from the shoulder, increases control and direction as the inner rings close in when the horse is checked. Very popular with the jumpers as this sits them on their hocks and helps with those tight accurate turns. Often recommended for horses that snatch down or pull the rider forwards. The inner rings act as a softening buffer through the rein so riders with a weak back or arthritis will usually find great benefits. A favourite for driving when a Liverpool is not compulsory. One of the few designs to provide extra directional control that is not a fixed cheek.
