Brilliant for faster work offering varying degrees of control with a curb strap option. This versatile all-rounder offers extra control and lift from the shoulder without discomfort or severity, allowing your horse to soften and relax through the jaw. Our Universal cheeks are a very popular rider's choice for faster work as they offer extra control and enhanced turning. This also means the Verbindend Universal is highly recommended for flat work/training in order to lighten the forehand, thus developing throughness and establishing self carriage.
